I. EXECUTIVE SUMMARY

The Jobs and Labor Market Forecast, the flagship labor market information report of the Bureau of Local Employment, forecasts the state of the labor market for the next two years by giving information on Key Employment Growth Sectors, Emerging Industries, In-Demand, Hard-to-Fill Occupations, and other relevant information on the labor market.

It was mainly sourced from a mix of primary and secondary sources, discussing four main components, namely, the demand side, supply side, employment facilitation programs, and development plans. Accordingly, the following findings can be gleaned from this report:

A. Labor Market Context

Various economic and employment indicators show that the labor market is back in its pre-pandemic state. The relaxation of mobility restrictions has likely made education and training more accessible, leading to an expected increase in labor supply. Additionally, as industries recover, there is a projected increase in demand for workers. While external factors may pose challenges to economic growth, the administration of President Ferdinand Marcos Jr. is deemed to be in a favorable position to implement national employment strategies and contribute to the country's National Vision, considering the manageable pandemic situation.

B. Labor Market Outlook

Key Employment Growth Sectors are expected to boost employment creation with increased economic activities in the industry, agriculture, and service sectors. The transformative effects of the Digital Economy and Green Economy are anticipated to have a significant impact on the labor market. These sectors are expected to create new job opportunities and drive economic growth. However, to fully benefit from these developments, it is crucial to focus on skills development. Ensuring the availability of a skilled workforce will be essential for individuals to take on job roles in these emerging sectors. By investing in education and training programs that align with the demands of the Digital Economy and Green Economy, the country can better position itself to harness the potential benefits and meet the evolving needs of the labor market.

C. Employment Facilitation Programs

The Department of Labor and Employment continues to improve and update its existing employment facilitation programs to cater the needs of its clientele and to respond to the changing labor market conditions. It has been enhancing its labor market information systems, and continuously improving its job matching system to provide more accurate and relevant information to job seekers and employers. The promotion of skills development training is crucial in ensuring that individuals have the necessary skills to meet the demands of the changing labor market. Additionally, interventions focused on career development support, youth employability, and other employment facilitation mechanisms can further enhance the department's efforts in addressing the needs of its clientele. These initiatives demonstrate a proactive approach towards adapting to the evolving labor market conditions and supporting the workforce in their career journeys.

II. METHODOLOGY

The Jobs and Labor Market Forecast report was sourced from a mix of primary and secondary sources, utilizing the framework below:

There were four (4) main components of the framework, namely, demand side, supply side, employment facilitation programs, and development plans as described below:

- A. Demand side** – This is the side of the labor market that mainly refers to the availability of jobs. The report will cover the prospect for growth of the industries, including emerging industries that can be a source of employment opportunities, and jobs offered in the digital economy. Likewise, it will look into the priority skills needed by these industries to help workers improve their employability in the new normal.
- B. Supply side** – This is the side of the labor market that mainly refers to the availability of workers. The report will cover the profile of jobseekers and the supply forecast in the coming years.

Considering these key components, the double-headed arrow indicates the relationship between the demand and supply sides of the labor market which ought to be matched to successfully place workers in available jobs. However, the reality in the labor market is that the supply of workers is not always matched with the demands of the industry (vice versa). Hence, the broken line indicating employment facilitation programs which is the third component of the report.

- C. Youth Employment and Labor Market Facilitation Programs** – This refers to interventions of the government to match the supply and demand of the labor market. It includes programs and services such as public employment services (including career development support), youth employability programs (SPES, GIP, JobStart), PhilJobNet and PEIS enhancements, Career Information System, and skills development programs.

The mentioned components of the framework are all influenced by the macro environment to which the labor market operates. Thus, the final component is the National and Sectoral Development Plans:

D. Development Plans – This covers the overall development plan and strategies of the government which steer the labor market towards priorities anchored on the attainment of its development goals such as the Philippine Labor and Employment Plan (PLEP) and the Philippine Development Plan (PDP).

III. LABOR MARKET SITUATION

The Jobs and Labor Market Forecast 2023 Updates, formerly known as JobsFit Labor Market Information (LMI) Report, is a comprehensive publication by the Bureau of Local Employment (BLE) that provides key updates on the country's labor market situation. It serves as the primary source of information on various aspects of the labor market, including Key Employment Growth Sectors, Emerging Industries, In-Demand Occupations, Hard-to-Fill Occupations, and other relevant data. The report offers both national and regional LMI, catering to the needs of students, jobseekers, researchers, policymakers, and other stakeholders. It aims to facilitate informed decision-making, program development, career planning, and workforce development initiatives.

Its first edition was published in 2010 as a documentation report that enumerates industries that will create jobs and identifies skills needed for the future. With the world of work exponentially changing, the report was updated in 2014 and 2017 through a desk review of administrative data and relevant research studies, and stakeholders' consultations. As the labor market further evolves, and with the COVID-19 pandemic causing major disruptions and introducing significant changes in the world of work, special publications of the JobsFit LMI Report were released in 2020 and 2021, respectively.

With the country's improving economy, and the labor market at the crossroads of the transformative changes brought by the digital and green economies, this updated edition of the report forecasts the shaping of the labor market for the next two (2) years, with the same objective of contributing to the efforts of the government to address the prevailing job-skill mismatch through timely, relevant, and accurate LMI. It is envisioned that this report will contribute to informed decision-making and facilitate the alignment of job opportunities with the skills required in the evolving labor market.

Table 1. Employed Persons by Major Industry Group, Philippines: 2021, 2022 and December 2023^P (In thousands except rates)

Industry	2021	2022	December 2023	2021 vs 2022 ^P		2022 ^P vs December 2023 ^P	
				Increment	Growth Rate	Increment	Growth Rate
All Industries	43,988	46,870	50,525	2,882	6.6	3,655	7.8
Agriculture	10,657	10,832	12,315	175	1.6	1,483	13.7

Source: Philippine Statistics Authority, Labor Force Survey

Note: p Preliminary

The results of the December 2023 Labor Force Survey showed that employment increased by 3.655 Million or 7.8% compared to the 2022 annual estimates - from 46.870M in 2022 to 50.5255M in December 2023. Significant increase in employment were observed in agriculture and forestry (+1.466M or 15.4%); accommodation and food service activities (+706,000 or 39.0%); construction (+705,000 or 16.1%); other service activities (+312,000 or 11.2%) and transportation and storage (+234,000 or 7.2%).

Meanwhile, a drop in employment was observed in Wholesale and retail trade (-120,000), Financial and Insurance Activities (-87,000), Professional, Scientific and Technical Activities (-36,000), Human Health and Social Work Activities (-29,000), and Arts, Entertainment and Recreation (-24,000).

IV. EMPLOYMENT FORECASTING PRACTICES

As part of a broader goal to better inform policy makers and researchers of the key trends in labor market that ultimately determine the status and well being of the world's workers, various agencies such as the International Labor Organization (ILO) produced estimates of labor market indicators (i.e. unemployment, employment by sector and status, labor productivity and working poverty, etc.) disaggregated by age and sex. The Key Indicators of the Labour Market (KILM), the Global Employment Trends and related papers, and other regional trends reports are among the ILO publications that make use of these estimates. Reports from other agencies, many of which are connected to the Change to Sustainable Development Goals (SDGs), also make use of the data.

Missing data presents the largest obstacle to the creation of aggregate estimations. Ideally, calculating global and regional estimates of labor market indicators—like employment, for instance—would only involve adding up the total number of people who are employed worldwide or in a certain location. However, it is not possible to construct aggregate estimates of labor market variables by simply adding across nations because not all countries collect and/or report data every year and, in fact, some do not provide data for any years at all.

Three econometric models that the ILO Trends Unit actively maintains have been developed to address the issue of missing data. These models are used to generate estimates of labor market indicators for the nations and years for which actual data are unavailable. Estimates of the population that is economically engaged and labor force participation rates are produced by the Trends Labor Force Model. Estimates of unemployment, employment-to-population ratios, employment status, employment by sector, labor productivity, and employment elasticities are produced using the Global Employment Trends Model, if possible broken down by age and sex. Lastly, the Trends Working Poverty Model provides estimates of the working poor globally.

International
Labour
Organization

Philippine Employment Projection Model

The ILO, in collaboration with Inforum (University of Maryland), developed employment projection models for a number of developing countries including the Philippines. It is through this projection that the Philippine Employment Projection Model was based.

The initial version of the model was presented during a workshop held in Manila in November 2010 and has subsequently been updated and expanded. The version of the model presented in a working paper was completed in May 2012.

The working paper illustrated the potential and applications of EPMs, building on the Philippines Employment Projection Model (PEPM). PEPM is an example of EPMs that have been built with support from the ILO as well as Inforum for Ukraine, Mongolia, Peru and Viet Nam, which are based on an interindustry input-output structure. The paper described the main features of the model, and provided an analysis of the results (mid-term employment projections), given the baseline assumptions.

The Department aims to produce an updated version of the PEPM that will utilize various employment data as input (i.e. administrative data, survey results, satellite accounts, and key information from industry organizations and job boards). Similar to the said ILO working paper, the updated version of PEPM will provide an evidence-based employment forecast depending on exogenous assumptions.

In the absence of the updated PEPM, the Department took advantage of available resources for the analysis of the country's labor supply and demand. Through a series of consultations facilitated by the DOLE ROs, the valuable insights of the key stakeholders were consolidated and considered in the development of this LMI report.

As mentioned above, the establishment of a reliable employment forecasting method is a vital step in projecting the possible employment scenarios in a specific area. Below are the forecasting methods being implemented by other countries:

The **European Centre for the Development of Vocational Training (CEDEFOP)** offers skill forecast country reports that condense key future trends in jobs and skills for individual EU Member States. These reports provide a concise outlook on national employment trends by sector, occupational group, and education level, alongside developments in the working-age population by age and gender. By analyzing both demand and supply, potential future labor market imbalances can be identified. A common methodology and harmonized data ensure comparability of results across Member States, while adhering to official EU economic forecasts and population projections. The latest forecast covers the period up to 2035 and incorporates global economic developments observed until Spring 2022. Short-term GDP projections align with Ameco's Spring 2022 Economic Forecast, while long-term projections are adjusted to reflect the European Green Deal, based on information from the European Commission Fit-For-55 Impact Assessment (as the 2021 Ageing Report lacks relevant assumptions). Cedefop (the European Centre for the Development of Vocational Training) carries out a pan-European Forecasting Model which uses the macroeconomic model (E3ME) developed by Cambridge Econometrics and employment projections of the Warwick Institute for Employment Research (IER). It provides comprehensive information on future labor market trends in Europe, including projections on labor force, employment trends and job opportunities.

- **Czech Republic** has initiated the “Technical Assistance to Study Methods of Forecasting Employment and Unemployment in the Czech Republic” project, which explored various approaches to forecasting employment and unemployment utilizing existing data structures. However, the project primarily concentrated on the overall level of employment and did not address the prediction of training needs. The ongoing transitional processes in the economy pose challenges to regular forecasting. Moreover, there exist significant institutional uncertainties regarding future reforms in the education system. While these factors do not preclude forecasting, they complicate the process, necessitating adjustments to methods that have been successfully and regularly employed in Western countries. Additionally, a distinctive aspect is the relatively short time series of available statistics. Only monthly statistics offer a sufficiently extended series to base forecasts on medium-term trends of developed indicators, yet they are susceptible to various sources of variation unrelated to the phenomenon under scrutiny. Aggregate time series are frequently influenced by changing methodologies.
- **Australia** has engaged Victoria University to generate employment projections up to 2033, utilizing their Victoria University Employment Forecasting Model. This data is categorized by industry, occupation, and skill level. Victoria University's Employment Forecasting Model is grounded in a computable general equilibrium model. The Victoria University Employment Forecasting (VUEF) project endeavors to address inquiries within the framework of a macroeconomic model that can integrate detailed structural and demographic changes. These projections have been aligned with the macroeconomic and labor market outlook provided by the Australian Treasury. The presentation of projections spans a 5-year period to emphasize short-term trends and extends to a 10-year horizon to illustrate the impact of longer-term or structural trends.
- The **United Kingdom's Employment forecasts** are carried out by the Warwick Institute for Employment Research (IER) at Warwick University, based on the macroeconomic forecasts

of the Cambridge Econometrics (CE). They are commissioned by the Sector Skills Development Agency (SSDA) or UK Commission for Employment and Skills (UKCES). IER was the first research group in Europe to produce regular employment forecasts.

MINISTÈRE DU TRAVAIL, DE L'EMPLOI ET DE L'INSERTION

*Liberté
Égalité
Fraternité*

- **France's** employment forecasts are currently carried out at national, sectoral and local level, with different bodies responsible for the forecasting activity in each case. At national level, the Institute of Economic Forecasting (BIPE) carries out forecasts, at local level the Regional Employment and Training Observatories (OREF) is involved, while the Statistical and Economic Research Department of the French Ministry of Employment produce quantitative employment projections.
- In **Germany**, there are three main research institutions involved in forecasting: the Institute for Labour Market and Vocational Research (IAB), the Federal Institute of Employment, and the Federal Institute for Vocational Training (BiBB). IAB's comprehensive employment forecast is based on an open econometric model that includes a modified trend extrapolation of some aspects of employment structure supported by qualitative expert ratings and quantitative scenario techniques

- In **Canada**, the employment forecasting methodology relies on analyzing approximately 30 labor market indicators (such as the unemployment rate, employment growth, job vacancies growth and duration, proportion of overtime workers, and Employment Insurance recipients) based on occupational groupings. Imbalances, whether shortages or surpluses, are identified when indicators exhibit significant deviations from the average for all occupations and/or their historical norms. A macroeconomic outlook, encompassing factors like demography, immigration, and economic growth by sectors, is employed to ascertain future long-term trends in overall employment growth and the distribution of employment across industries and occupations. Subsequently, the projected number of job openings (new demand) and job seekers (new supply) is estimated to determine whether the imbalances identified in the assessment of recent conditions (step 1) are anticipated to persist over the long term or if new imbalances are likely to emerge.
- In **Japan**, various organizations make labor market projections, but the most representative is that produced by the Ministry of Labour (MoL). The projections are based around forecasts from a multi-sectoral macro model, including both supply and demand blocks.
- The organization responsible for labor market projections in the **United States of America** is the Bureau of Labour Statistics (BLS) which has been examining future job prospects for over 50 years. Projections are based on macroeconomic growth, population census and labor force surveys, and occupational employment surveys. Efforts have been made to measure generic skills in recent years, including the development of the O*NET system.
- In **Ukraine**, at the request of the Ministry of Economic Development and Trade and with the involvement of the Ukrainian Centre for Social Reforms (UCSR), the ETF supported the development of a 'Pilot Quantitative Skills Forecast' in Ukraine. The forecast methodology followed the standard steps of the multi-sectoral, modular-based quantitative model, which is similar to Cedefop's trans-European skills forecasting. Its main pillars contained macro-module, expansion demand module, replacement demand module, supply module, and imbalance.

V. LABOR SUPPLY AND DEMAND

A. Labor Demand

Based on the consolidated news articles and government reports, President Ferdinand Marcos Jr.'s official state visits have opened doors to new trade and business opportunities. The majority of these new jobs are in Key Employment Growth Sectors (KEGS) identified by DOLE agenda as having strong potential for growth and workforce absorption. KEGS refer to major industry groups with the greatest potential to generate employment and absorb the bulk of the workforce in the years to come. The following sectors were identified as KEGS:

IT-BPM

Agriculture

Creative Industries

Energy

Transport & Logistics

Hotel,
Restaurant &
Tourism

Manufacturing

Education

Construction

Health &
Wellness

According to the results of the consultations conducted by the DOLE Regional Offices, the majority of the regions identified construction, wholesale and retail trade, and agriculture as KEGS.

Figure 1. **Key Employment Growth Sectors by Region, Philippines: 2023 to 2025**

To date, these investments are expected to generate an estimated 305,535 jobs nationwide as shown in the table below. While these visits present promising opportunities, numerous factors that may influence investment decisions and eventual materialization should be considered. Recognizing this, President Marcos has emphasized the need to swiftly address investor-unfriendly rules and regulations.

As such, a Congressional Policy and Budget Research Department article, “Examining the Factors that Affect Foreign Direct Investments in the Philippines,” identified key investment considerations for foreign investors: (i) macroeconomic condition; (ii) size of domestic market; (iii) cost of labor and other inputs; (iv) availability of talent and skill of labor; (v) tax rates and incentives; (vi) infrastructure (transportation, electricity and communications); (vii) legal and regulatory environment; (viii) foreign ownership restrictions; (ix) political and peace and order condition; and (x) geography. Additionally, as cited in the International Monetary Fund’s working paper “The Direct Employment Impact of Public Investment,” public spending on infrastructure can significantly boost job creation, with one percentage point of global GDP in additional spending creating over seven million jobs worldwide.

Table 2. Employment Projections based on Foreign Pledges by Country 2022 - 2023

Country/Date	Employment Projections
Indonesia 4 - 6 September 2022	At least 7,000 new job opportunities in the infrastructure, textiles, garments, and renewable energy industry. Identified Key Employment Growth Sectors (KEGS): • Construction • Manufacturing Emerging Sector: • Renewable Energy
Singapore 6-7 September 2022	15,000 jobs to employ Filipinos, especially in the Information Technology (IT) and creative industry, and recruitment of healthcare workers. Identified KEGS: • IT- BPM • Health and Wellness Emerging Sector: • Renewable Energy
USA 18-24 September 2022	Potential employment generation of 112,285 jobs in the Information Technology and Business Process Management (IT-BPM), data centers, and manufacturing sectors Identified KEGS: • IT-BPM • Manufacturing Emerging Sector: • Renewable Energy
Thailand 16-19 October 2022	Possible additional job opportunity in aquaculture, rice and swine production (<i>Data unavailable</i>) Identified KEGS: • Agriculture
Belgium 12-14 December 2022	500 to 600 indirect jobs expected to be generated from shipbuilding firms. Identified KEGS: • Transport and Logistics
China 04 January 2023	Possible additional job opportunities in agriculture, maritime and tourism (<i>Data unavailable</i>) Identified KEGS: • Agriculture • Transport and Logistics • Hotel, Restaurant and Tourism
Switzerland 16-20 January 2023	Possible creation of jobs, particularly in the MSMEs which comprise about 99.5 percent of the businesses in the country (<i>Data unavailable</i>) Identified KEGS: • Wholesale and Retail Trade
Japan 8-12 February 2023	Approximately 24,000 jobs in the field of energy Emerging Sector: • Renewable energy
Washington, DC 30 April to 4 May 2023	Potentially provide 6,700 jobs Identified KEGS: • Renewable energy

Malaysia 25-27 July 2023	An estimated 100,000 jobs and livelihood opportunities, and 250 local workers for milk production. Identified KEGS: • Agriculture
Japan 15-18 December 2023	An estimated 40,200 jobs will be generated from P771.6 billion or about \$14 billion in pledges from Japanese investors Identified Industries: • IT-BPM • Expansion of furniture and home furnishing chain • Production improvement and replacement of aging Philippine facilities.
ESTIMATED TOTAL	305,535*

Note: *Conservative preliminary estimate based on available data.
Excludes pledges without an identified number of jobs to be created.

"Opportunities lie in the agriculture, forestry and fishing; administrative and support service activities; and electricity, gas, steam and air conditioning supply sectors." - Investment Promotion Agencies

Figure 2. **Approved Foreign Investment Data: 4th Quarter, 2023**

Sources of data: AFAB, BOI, BOI-BARMM, CDC, CIAC, PEZA and SBMA

The PSA recently reported the Total Foreign Investments (FI) approved in the fourth quarter of 2023 which was recorded at PhP 394.45 billion, an increase of 127.2 percent from the PhP 173.61 billion total FI in the same quarter of 2022. These investments were pledges from the following Investment Promotion Agencies (IPAs), namely: Authority of the Freeport Area of Bataan (AFAB), Board of Investments (BOI), Clark Development Corporation (CDC), Philippine Economic Zone Authority (PEZA), and Subic Bay Metropolitan Authority (SBMA). However, no foreign investment approvals were reported by the Bases Conversion and Development Authority (BCDA), BOI-Bangsamoro Autonomous Region in Muslim Mindanao (BOI-BARMM), Cagayan Economic Zone Authority (CEZA), Clark International Airport Corporation (CIAC), John Hay Management Corporation (JHMC), Poro Point Management Corporation (PPMC), Tourism Infrastructure and Enterprise Zone Authority (TIEZA), and Zamboanga City Special Economic Zone Authority (ZCSEZA).

Of the total approved FI for the fourth quarter of 2023, Netherlands posted the highest investment commitment amounting to PhP 345.76 billion or 87.7 percent. It was followed by Japan at PhP 31.37 billion, and Singapore at PhP 4.99 billion. These accounted for 8.0 percent and 1.3 percent, respectively.

Electricity, gas, steam, and air conditioning supply industry received the largest amount of approved investments at PhP 335.87 billion or 85.1 percent of the total approved FI. This was followed by Manufacturing with PhP 48.96 billion and Administrative and support service activities with PhP 5.70 billion, with a share of 12.4 percent and 1.4 percent, respectively.

Among the regions in the country, Bicol Region received the largest share of pledged investment amounting to PhP 162.92 billion or 41.3 percent of the total approved FI for the fourth quarter of 2023. This was followed by Eastern Visayas with PhP 108.30 billion and Ilocos Region with PhP 58.52 billion. These accounted for 27.5 percent and 14.8 percent of the total FI, respectively.

In the fourth quarter of 2023, combined approved investment from foreign and Filipino nationals totaled PhP 585.15 billion. IPA reports anticipate these projects to generate **28,529 new jobs**, with foreign investment projects contributing 82.7% (23,596 jobs). The bulk of these opportunities lie in the **agriculture, forestry and fishing; administrative and support service activities; and electricity, gas, steam and air conditioning supply sectors.**

2022 Statistics on Philippine MSMEs

The 2022 List of Establishments (LE) released by the Philippine Statistics Authority (PSA) documented a total of 1,109,684 business enterprises actively operating within the country. Among these, 1,105,143 (99.59%) fall under the MSME category, while the remaining 4,541 (0.41%) are identified as large enterprises. Micro enterprises make up the majority at 90.49% (1,004,195), followed by small enterprises at 8.69% (96,464), and medium enterprises at 0.40% (4,484).

• Sectoral Distribution

In terms of the number of MSMEs in 2022, the top five industry sectors are: (1) Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles (546,863); (2) Accommodation and Food Service Activities (158,113); (3) Manufacturing (133,504); (4) Other Service Activities (71,145); and (5) Financial and Insurance Activities (50,782). Collectively, these sectors account for approximately 86.90% of the total number of MSME establishments.

• Geographical Spread of MSMEs

The majority of MSMEs are concentrated in specific regions, with the National Capital Region (NCR) hosting 204,844 (18.54%) establishments, followed by Region 4-A (CALABARZON) with 163,710 (14.81%), Region 3 (Central Luzon) with 139,912 (12.66%), Region 7 (Central Visayas) with 79,689 (7.21%), and Region 6 (Western Visayas) with 75,553 (6.84%). These top five locations collectively contribute to about 60.06% of the total number of MSME establishments, a distribution largely influenced by economic activity and population size.

V. LABOR SUPPLY AND DEMAND

B. Labor Supply

- **Department of Education**

The Department of Education (DepEd) is responsible for formulating, implementing, and coordinating policies, plans, programs, and projects in the domains of formal and non-formal basic education. It exercises supervision over all institutions offering elementary and secondary education, encompassing both public and private entities, as well as alternative learning systems. Furthermore, DepEd is mandated to establish and ensure the upkeep of a comprehensive, sufficient, and integrated basic education system aligned with the objectives of national development. In the School Year 2021-2022, a total of 60,429 schools, including Philippine Schools Overseas (PSOs), are engaged in providing basic education to learners. Concurrently, there are 28,033,530 learners nationwide, encompassing both regular students and those participating in the Alternative Learning System.

Figure 4. Total SHS Enrollees per Track S.Y. 2022-2023

Source: Department of Education

The DepEd has designed the SHS program with the aim of producing graduates well-prepared for higher education and capable of initiating their enterprises or securing employment, even in the absence of a college degree.

This initiative is an integral component of the K-12 enhanced basic education program, which was legislated in 2013 to establish a functional basic education system. The objective is to cultivate productive and responsible citizens equipped with essential competencies, skills, and values conducive to both lifelong learning and gainful employment.

In the academic year 2022-2023, approximately 4.18 million students have enrolled in DepEd SHS, with 70% opting for the Academic Track, 29% for the TVL Track, and 0.5% for the Arts Track and Sports Track. Within the 2.95 million academic track enrollees, 36.2% are in HUMSS, followed by GAS at 24.6%, STEM at 23.4%, ABM at 15.6%, and PBM at 0.18% (see Annex A).

Figure 5. Senior High School Track Enrollees S.Y. 2022-2023

Source: Department of Education

The three regions with the highest number of SHS enrollees are Region IVA, with 1,046,064 enrollees, Region III, with 452,277 enrollees, and Region VII, with 342,478 enrollees. In terms of SHS tracks, Region IVA leads in enrolments across Academic, TVL, Sports, and Arts Tracks. On the other hand, the National Capital Region (NCR) has the lowest number of enrollees in both Academic and TVL Tracks.

The DepEd shared that the Senior High School work immersion program has significantly contributed to a commendable passing rate of 90 percent in the National Certificate assessment conducted by TESDA.

However, based on the DepEd report that concerns have been raised by industry partners regarding the duration allocated for work immersion, asserting that it mainly serves for familiarization rather than substantial skills acquisition. Presently, a considerable number of Senior High School graduates perceive the necessity of pursuing higher education to enhance employability.

According to the National Senior High School tracer study conducted by the Bureau of Curriculum Development, 83 percent of respondents opted for higher education, while just over 10 percent secured employment. The K-12 curriculum was designed with the promise of producing job-ready graduates, prompting the DepEd to initiate a comprehensive review of the Senior High School curriculum which is target to release in May 2024.

The DepEd emphasizes the need to align the curriculum with current demands, aiming to generate competent, job-ready, active, and responsible citizens. Furthermore, they are committed to revising the K to 12 Curriculum, ensuring its responsiveness to the national aspirations, fostering the development of lifelong learners equipped with 21st-century skills, discipline, and patriotism.

- **Technical Education and Skills Development Authority**

The TESDA is a government agency that is responsible for overseeing Technical Education and Skills Development (TESD) in the Philippines. The TESD aims to empower individuals, fostering responsibility and productivity among citizens. Presently, TESDA administers 316 Training Regulations, 74 Competency Standards, and 570 Diploma Programs.

Figure 6. Number of Target and Accomplished TVET Beneficiary C.Y. 2022

Source: Technical Education and Skills Development Authority | 2022 TVET Statistics

In the Calendar Year 2022, there were 1,260,244 enrollees and 1,231,284 graduates, resulting in a completion rate of 97.70%. The number of assessed individuals was 907,244, with 844,368 certified, yielding a certification rate of 93.07% (see Annex B).

Figure 7. Completion Rate and Certification Rate by Region: C.Y. 2022

Figure 8. Number of TVET Enrolled, Graduates, Assessed and Certified by Region: CY 2022

Source: Technical Education and Skills Development Authority | 2022 TVET Statistics

Analyzing the distribution of graduates across sectors, the top three performing areas were Agriculture, Forestry, and Fishery (18.55%); Tourism [Hotel and Restaurant] (15.67%); and Automotive and Land Transportation (9.77%). Conversely, Pyrotechnics and Furniture and Fixtures exhibited the lowest training output. Examining the data related to assessment and certification, the sectors of Tourism [Hotel and Restaurant] (Assessed - 22.44%; Certified - 21.42%), Agriculture, Forestry, and Fishery (Assessed - 18.88%; Certified - 19.30%), Automotive and Land Transportation (Assessed - 14.12%; Certified - 13.35%), and Metals and Engineering (Assessed - 12.57%; Certified - 11.99%) emerge as having the highest quantity of individuals assessed and certified.(see Annex C).

Figure 9. Number of TVET Enrolled, Graduates, Assessed and Certified by Sector: CY 2022

- **Commission on Higher Education**

The Commission on Higher Education (CHED) is the Philippine government's agency in charged with promoting relevant and quality higher education, ensuring access to quality higher education, and guaranteeing and protecting academic freedom for continuing intellectual growth, advancement of learning and research, development of responsible and effective leadership, education of high level professionals, and enrichment of historical and cultural heritages.

The CHED shared that in the next five years, they will focus on inclusive education by informing public universities to be very conscious in identifying students from public schools, students from poverty areas, the children of indigenous people, those have been marginalized, to assisted on the admission processed to be enrolled in public universities and to be eligible for Universal Access to quality tertiary education. To date, the country has 41 percent university participation, higher than the 2015 data of about 30 percent.

Figure 10. Number of Enrolled and Graduates A.Y. 2014-2015 - 2019-2020

Source: Commission on Higher Education

Based on CHED's data, there has been a 17% decline in enrollees, decreasing from 4,104,841 in Academic Year (A.Y.) 2015-2016 to 3,408,425 in A.Y. 2019-2020. Among the top 10 disciplines with the highest number of enrollees, the discipline experiencing the most significant increase is in Other Discipline, with a growth of 5.1%, while Maritime has witnessed a decline of 44.8%. Furthermore, the Maritime discipline demonstrates a decrease in graduates over the past five years, amounting to 35.2%. Considering that the number of graduates in A.Y. 2015-2016 was 4,104,841 and in A.Y. 2018-2019 was 795,576, the data indicates that an estimated 19.4% have graduated from tertiary education (see Annex C).

Figure 11. A.Y. 2020-2021 Number of Graduates by Region

Source: Commission on Higher Education

For the A.Y. 2020-2021, derived from the submissions of 2,105 out of the total 2,424 Higher Education Institutions, reflecting an approximate compliance rate of 87% as of April 26, 2023, it is evident that the top three regions with the highest number of graduates are Region XII, totaling 432,581, followed by the National Capital Region (NCR) with 53,982, and CALABARZON with 35,255. Conversely, the MIMAROPA region records the lowest number of graduates with 4,681.

Figure 12. Top 5 Discipline A.Y. 2020-2021

Source: Commission on Higher Education

According to the CHED report for the A.Y. 2020-2021 on the number of graduates by discipline group, the top three disciplines with the highest number of graduates are Education Science and Teacher Training, with 151,807 graduates, followed by Agriculture Forestry Fisheries, with 151,435 graduates, and Business Administration and Related, with 124,917 graduates.

VI. PRIORITY SKILLS REQUIREMENT

A. In-Demand Occupations

In-Demand Occupations refer to job vacancies posted recurrently by establishments and industries and have a high turnover or replacement rate. The following are the in-demand jobs identified for 2023-2025:

Table 3. In-Demand Jobs, Philippines: 2023-2025

1. Accountant	21. Merchandiser	41. Sales Clerk	61. Lineman
2. Customer Service Representative	22. Nurse	42. Salesman	62. Machinist
3. Driver	23. Service Crew	43. Software Developer	63. Marketing Personnel
4. Cashier	24. Teacher	44. Supervisor	64. Mechanic
5. Electrician	25. Automotive Mechanic	45. Tour guide	65. Online Tutor
6. Heavy Equipment Operator	26. Bagger	46. Truck Driver	66. Operator
7. Mason	27. Call Center Agent	47. Virtual Assistant	67. Pharmacist
8. Safety Officer	28. Chef	48. Accounting Staff	68. Pollution Control Officer
9. Sales Representative	29. Content Writer	49. Architect	69. Production Engineer
10. Welder	30. Cook	50. Automotive Servicing	70. Receptionist
11. Delivery Driver	31. Digital Marketer	51. Bartender	71. Researcher
12. Mechanical Engineer	32. Digital Marketing Specialist	52. Chemical Engineer	72. Security Guard
13. Web Developer	33. Domestic Helper	53. Computer Programmer	73. Social Media Manager
14. Carpenter	34. Electrical Engineer	54. Elementary Occupation	74. Social Media Marketing Specialists
15. Laborer	35. Farmer	55. Equipment Operator	75. Stockman
16. Office Staff	36. Housekeeping Staff	56. Foreign Language Specialist	76. Technician
17. Bookkeeper	37. Librarian	57. Front Office Staff	77. Telemarketer
18. Engineer	38. Pipefitter	58. Guidance Counselor	78. Bank Teller
19. Forklift Operator	39. Production Crew	59. Kitchen Staff	79. Utility Worker
20. IT Specialist	40. Production Worker	60. Layout Artist

C. Emerging Jobs

Based on LinkedIn's 2023 Emerging Jobs Report Philippines, an "emerging job" refers to a role that has seen tremendous growth within a region. This means, while there may not be a large pool of talent who hold these occupations, there is a large, sustained year-over-year growth of professionals who are hired into the role and believe these to be long-term trends.

Table 6. Top 15 Emerging Jobs 2023 from LinkedIn

Emerging Jobs	Common Skills
1. Frontline E-commerce Workers	Good Time Management, Customer Service, Leadership quality.
2. Loan and Mortgage Experts	Risk Management, Customer Service, and Credit Analysis.
3. Health Care Support Staff	Patient Education, Data Entry, and Physician Relations.
4. Business Development and Sales Professionals	Customer Retention, Sales Process, and Team Building.
5. Experts in Workplace Diversity	Community Outreach, Teaching, Organizational Development.
6. Digital Marketing Professionals	Product Marketing, Digital Strategy, and Brand Management.
7. Nurses	Patient Advocacy, Clinical Research, and Time Management.
8. Education Professionals	Lesson Planning, Time management, and Differentiated Instruction.
9. Digital Content Creators	Video Editing, Creative Writing, and Public Speaking.
10. Professional and Personal Coaches	Mentoring, Social Media, Entrepreneurship
11. Specialized Engineers	Programming knowledge (Python, Java, C++, and more), Web development (HTML, JavaScript, CSS, and more), knowledge of DBMS.

12. Mental Health Specialists	Play Therapy, Mindfulness, and Cognitive Behavioral Therapy (CBT).
13. User Experience (UX) Professionals	Web Design, Design Thinking, User Experience Testing.
14. Data Science Specialists	Math, ML (machine learning), SQL, and programming knowledge as well.
15 Artificial Intelligence Practitioners	Programming Knowledge (Python need for this), web services knowledge, and ML.

D. Human Skills or Soft Skills

With the fast-transforming world of work, workers must prioritize developing their soft skills to keep up with the labor market's demands. While hard skills demonstrate a candidate's technical ability to fulfill the job requirements, soft skills demonstrate a candidate's work ethic and character, including how well of a fit they are for the company's culture and goals. Workers and jobseekers must continue to upskill and reskill, and be armed with relevant digital and 21st Century Skills, in order to survive and remain competitive despite disruptions in the labor market.

The World Economic Forum identified the top 10 core skills judged to have increasing importance between 2023 and 2027 from the Future of Jobs Report 2023. The inclusion of three (3) Cognitive skills (Creative thinking, analytical thinking and systems thinking) reflect the increasing importance of problem-solving skills in the workplace. Three (3) self-efficacy skills (Curiosity and lifelong learning; Resilience, flexibility and agility; and Motivation and self awareness) were included in the top skills wherein business consider socio-emotional attitudes in growing importance. Results of the report shows that soft skills had increasing importance while physical abilities declined importance from previous Future of Jobs Reports.

Figure 13. **World Economic Forum's Top 10 Skills on the Rise**

Moreso, Coursera’s “The Job Skills of 2024” report highlights the fastest-growing skills in business, technology, and data science, including AI, cybersecurity, and leadership, based on insights from five million learners across 3,000 businesses, 3,600 higher education institutions, and governments in 100+ countries. As such, the ongoing rise of AI fuels increasing demand for AI specialists, including prompt engineers and language model experts. Essential skills now include cybersecurity and audit capabilities to ensure data protection and compliance. Leadership skills are also in high demand to navigate through the evolving landscape of change and innovation.

VII. FUTURE OF WORK

Automation is reshaping the landscape of the labor workforce. According to the Future of Jobs Report 2023 published by the World Economic Forum, organizations estimate that 34% of all business-related tasks are performed by machines, with the remaining 66% performed by humans. It is predicted that 42% of business tasks will be automated by 2027. Task automation in 2027 is expected to vary from 35% of reasoning and decision-making to 65% of information and data processing. But while expectations of the displacement of physical and manual work by machines has decreased, reasoning, communicating and coordinating – all traits with a comparative advantage for humans – are expected to be more automatable in the future.

A. Senior High School Employability

The Department of Education (DepEd) started implementing the Senior High School (SHS) program in 2016 as part of the country's shift to the K-12 education system. Eight years since its implementation, various policymakers are looking for the effectiveness of the program in relation to its stated goals and as to address the difficulty of getting employed. It is in this endeavor that the DOLE, in partnership with JobStreet Philippines by SEEK conducted a "Senior High School Survey."

In 2019, the DOLE and JobStreet Philippines, conducted an initial study on the employability of SHS graduates aimed at determining: a) the willingness and readiness of employers to hire SHS graduates; b) the types and status of jobs available to them; and c) the employers' experience in hiring SHS graduates.

Similar research partnership was conducted this year to assess the: a) employers' understanding of the SHS program; b) the current job opportunities for SHS graduates; c) the competencies of those who received online learning during the pandemic; and d) the essential skills required for SHS graduates. The JobStreet Team presented the study results to the Bureau of Local Employment last October 10, 2023, following the additional questions raised during the meeting.

According to JobStreet's Senior High School (SHS) Survey Report 2023, there has been an increase in perceived understanding of the SHS graduates by 27%, which correlates to the hiring rate as well. More than half of the hirer respondents (57.7%) answered their willingness to have SHS graduates apply to available roles within their organization. This is a 140% increase compared to the pre-pandemic period in February 2018 (24% willingness).

Organizations with a strong understanding of the SHS Program are more likely to hire said graduates. This applies inversely as well.

Excluding Information Technology (IT) and Healthcare that require specialized training and certification, large organizations were more willing to have SHS Graduates as applicants. Industries that showed willingness to have SHS Graduates apply are in the fields where (1) manual labor is involved, (2) Hospitality, Food and Beverage, as well as Call Center/Business Process Outsourcing.

Figure 14. **Knowledge vs. Acceptance of SHS as Candidates**

Source: JobStreet Senior High School Survey Report 2023

According to the research, better employer education about the SHS Program can increase its adoption. Because of increased program awareness, the employment rate of SHS graduates has increased over time. However, because they lack industry-specific expertise, they are frequently relegated to general roles. Increasing online upskilling possibilities for young people can capitalize on Gen-Z's strengths while addressing perceived skill shortages.

B. World Economic Forum's Future of Jobs Report 2023

Based on the World Economic Forum Future of Jobs Report 2023, below are the technologies surveyed to highly likely be adopted by organizations from 2023 to 2027.

In the same report, almost all technologies were expected to net job creation from 2023 to 2027 except two technologies that had higher displacement (Humanoid robots and non-humanoid robots such as industrial automation or drones).

Figure 15. **Technology Adoption: 2023 - 2027**

Source: WEF Future of Jobs Report 2023

Figure 16. **Technology Adoptions that Will Impact Jobs: 2023-2027**

Source: WEF Future of Jobs Report 2023

C. Job creation and job loss

Based on the Future of Jobs Report 2023 study conducted by World Economic Forum on 23 May 2023, the following are the (i) jobs that reported to have higher job creation than job losses, and (ii) identified jobs which recorded higher losses than job creation, respectively:

Higher Job Creation than Job Loss	Higher Job Losses than Job Creation
1. AI and Machine Learning Specialists 2. Sustainability Specialists 3. Business Intelligence Analysts 4. Information Security Analysts 5. Fintech Engineers 6. Data Analysts and Scientists 7. Robotics Engineers 8. Big Data Specialists 9. Agriculture Equipment Operators 10. Digital Transformation Specialists 11. Blockchain Developers 12. E-commerce Specialists 13. Digital Marketing and Strategy Specialists 14. Data Engineers 15. Commercial and Industrial Designers 16. Business Development Professionals 17. Devops Engineers 18. Database Architects 19. Process Automation Specialists 20. Software and Applications Developers 21. Risk Management Specialists 22. Building Frame and Related Trades Workers 23. Technical Specialists 24. Database and Network Professionals 25. Application Developers 26. Project Managers 27. Full Stack Engineers 28. Architects and Surveyors 29. Advertising and Public Relations Professionals 30. Industrial and Production Engineers	1. Bank Tellers and Related Clerks 2. Postal Service Clerks 3. Cashiers and Ticket Clerks 4. Administrative and Executive Secretaries 5. Material-Recording and Stock-Keeping Clerks 6. Statistical, Finance and Insurance Clerks 7. Door-To-Door Sales Workers, News and Street 8. Security Guards 9. Credit and Loans Officers 10. Claims Adjusters, Examiners, and Investigators 11. Software testers 12. Relationship Managers 13. Shop Salespersons 14. Building Caretakers and Housekeepers 15. Insurance Underwriters 16. Social Media Strategist 17. Client Information and Customer Service Workers 18. Telemarketers 19. Accountants and Auditors 20. Compliance Officers 21. Social Work and Counseling Professionals 22. Paralegals and Legal Assistants 23. Primary School and Early Childhood Teachers 24. Sales and Purchasing Agents and Brokers 25. Assembly and Factory Workers 26. Business Services and Administration Managers 27. Car, Van and Motorcycle Drivers 28. Human Resources Specialists 29. Data Warehousing Specialists 30. Lawyers 31. Farmworkers and Laborers 32. Managing Directors and Chief Executives

Source: World Economic Forum

The COVID-19 pandemic accelerated the Fourth Industrial Revolution (FIRE), transforming the job market and propelling the digital economy forward. Digital natives, having grown up with technology, will further fuel the demand for digital products. Artificial Intelligence (AI) plays a pivotal role in FIRE's multifaceted transformations, with the World Economic Forum highlighting its role as a key driver of potential algorithmic displacement. AI adoption is expected among nearly 75% of surveyed companies, and it is anticipated to lead to high churn, with 50% of organizations expecting it to generate job growth and 25% expecting it to result in job losses.

Moreso, a **detailed 10-year forecast by Oxford Economics and Cisco** predicts a shift in the Philippine job landscape by 2028, with the elimination of **1.1 million jobs** pushing workers into different industries and occupations.

Table 9. Top 3 Jobs Displaced and Created: 2018-2028

Sector	Jobs Displaced	Jobs Created
Agriculture	1.2m (12.4%)	-
Wholesale & Retail	880k (8.5%)	1.3m (12.5%)
Manufacturing	380k (10%)	-
Transport	-	490k (13.2%)
Construction	-	460k (11.9%)

D. AHK World Business Outlook Survey Results - Fall 2023 Special Edition

The AHK World Business Outlook (AHK WBO) is based on a regular DIHK survey among member companies of the German Chambers of Commerce Abroad, delegations, and representative offices (AHK). It encompasses the feedback from more than 3,600 German companies, branches, and subsidiaries worldwide.

This special survey evaluated the Philippines' specific results in relation to those of other AHK entities in the ASEAN region and around the world - comparing potential risks and challenges faced at their respective sites. Additionally, the survey examined investment areas and influential factors, providing a comprehensive view of the business climate.

With the continuous improvement of the Philippine economy, German businesses operating in the country reveal bullish economic expectations and stronger intentions to increase employment over the next 12 months, especially when compared to their counterparts in ASEAN and other global locations according to the said report.

Moreover, the report shows that the Philippines ranks highest amongst ASEAN countries in positive outlook toward business situation (44%), expectation (63%), and employment intentions (48%) - illustrating that most of the participants plan to hire more within the country in the next 12 months. This indicates confidence, a positive outlook on business growth, and the intent of German-Philippine companies in hiring more Filipino workers.

Consistent with the results of the LFS, the Philippines has established dominance in the services sector, claiming the highest ranking at 44% as a pivotal factor for investment as well as maintaining a competitive edge in sales and marketing at 50%.

The report also provided strong recommendation for the Philippine government to take advantage of this momentum by instituting laws that seek to improve skills development of Filipinos such as amending the outdated Apprenticeship system and strengthening enterprise-based education. It may be recalled that one of the major changes proposed by President Marcos Jr. to the Apprenticeship law is to eliminate the cap on apprenticeship duration. This amendment acknowledges that the necessary length of training should be determined based on the specific skill or curriculum requirements.

E. Green Economy

There is no doubt that the COVID-19 pandemic triggered significant changes in the labor market, accelerating the Fourth and Fifth Industrial Revolutions and leading to the emergence of a complex phenomenon that intertwines technology, people, and the environment. We find ourselves navigating a landscape presenting both opportunities and challenges, where certain jobs become obsolete and new ones emerge to take their place. Another characteristic of the future of work is an intense acceleration in the evolution of professions and jobs, particularly in the emergence of the green, digital, care, and solidarity economies.

In 2016, our Congress passed a landmark legislation called the Philippine Green Jobs Act. It is the first of its kind in the ASEAN region. It defines green jobs and offers fiscal and non-fiscal incentives to support private-sector investments in green goods, services, and technologies. It helps us make sure that the jobs created within our shores benefit both people and the planet.

The same statute set the stage for the creation of a National Green Jobs Human Resource Development Plan. This plan serves as our road map for creating and sustaining green jobs. It focuses on policy coherence, educational reforms, job creation, workplace safety, social protection, and the mobilization of green financing. We know that national policies like this are not set in stone and must be modified on a regular basis to reflect changing labor market demands. As a result, we have committed to completely updating this Plan in partnership with our workers, employers, and other social partners to guarantee its alignment with the Philippine Development Plan (PDP) 2023-2028 and the Labor and Employment Plan (LEP) 2023-2028.

The PDP 2023-2028 and its accompanying LEP 2023-2028, which both emphasize the just transition of affected workers by incorporating strategies such as creating a green jobs database, integrating environmental protection, biodiversity conservation, and low-carbon practices into all technical-vocational education programs, actively considering the creation of green ecozones, and enabling micro, small, and medium-sized enterprises.

In the area of skills development, the Technical Education and Skills Development Authority (TESDA) plays a vital role in promoting green technology and incorporating sustainability practices into training programs and regulations. As of today, TESDA successfully mainstreamed green principles and practices to a wide range of programs, from photovoltaic systems to hydroponics, vertical gardening, and seaweed farming.

The Philippines is in a prime position to leverage and fully capitalize on the benefits of the worldwide transition towards renewable energy. To pursue the green jobs agenda, the Department has integrated strategies such as the development of modern and responsive technical and vocational education and training (TVET), apprenticeships, basic and higher education, and professional development interventions; mapping or forecasting industries to strategically adapt to the effects of climate change and green technologies; and mainstreaming gender and green competencies in training standards, modules, and curricula are crucial; as well as providing technical assistance and enhancing capacity-building programs for MSMEs, incorporating green and sustainable practices.

Further, the Philippine Green Jobs Act defines green jobs as employment that contributes to preserving or restoring the quality of the environment, as well as being jobs that are decent, productive, respect the rights of workers, deliver fair income, provide security in the workplace and social protection for families and promote social dialogue.

Environmentally sustainable activities products and services, and hence green job opportunities are available from a number of activities, including: mitigation activities (activities, products and services that reduce emissions of greenhouse gasses); adaptation to climate impacts and disaster risk management; protection of ecosystems and habitats and prevention of land degradation from human activities; efficiency of water and natural resource management; pollution prevention and control; environmental compliance; education and training; and public awareness.

According to a 2021 ILO Regional Study of Green Jobs Policy Readiness in ASEAN – March 2021 Final Report, the Philippines has many examples of sector specific greening policies and programs that have identified employment outcomes, including: Public Utility Jeepney (PUJ) Modernization program National Organic Agriculture Program, Anahaw-Philippine Sustainable Tourism Certification, and Sustainable Markets for Recyclables and Recycled Products. Part of the PGJA specifies a National Green Jobs Human Resource Development Plan to enable and sustain the transition to the green economy and the creation and green jobs. This plan will also act as a Just Transition Plan and is guided by the four pillars of decent work – employment creation and facilitation, social protection, social dialogue and rights at work.

Based on the stakeholders consultation of the regional offices for the development of the Regional JobsFit Labor Market Information Report, the following green jobs were identified:

Table 10. Green Jobs, Philippines: 2023-2025

1. Agriculture Technician	12. Engineer for Solar Energy	23. Forest Technician I	34. PV Systems Installer
2. Agriculturist	13. Engineering/ Build- Back-Better	24. GreenHouse Manager	35. Renewable Energy Officer
3. Carpenter	14. Environment, Health, and Safety Officer Facilities Engineer	25. HVAC Technician	36. Safety Engineer
4. Civil Engineer	15. Environmental Officer	26. Labor Inspector	37. Safety Officer
5. Compliance Specialist	16. Environmental Planner	27. Land Surveyor	38. Health & Safety Practitioner
6. Construction Manager	17. Environmental Protection Officer	28. Mining Engineer	39. Solar Panel Installer
7. E-Jeepney Driver	18. Environmental, Health, and Safety Officer	29. Occupational Safety & Health Officer	40. Solar Technician

VIII. PARTNERSHIP INITIATIVES

As part of the Department's initiative on strengthening its collaboration with relevant stakeholders and expanding its network across various industries and sectors, the Bureau has conducted various exploratory discussions and forged partnerships with different government agencies, private organizations, industry associations, and the academe, to develop action-oriented and results-driven initiatives, and expand its reach to address the needs of the Filipino workforce.

The initiatives are consistent with the goal of further strengthening the Department's technical capacity with the support of relevant partners to develop dynamic and responsive labor market information systems and programs, and link the demands of the industry with equipped labor supply and future labor market entrants.

This is also parallel with the thrusts of the Department to improve employment facilitation services and skills training programs to increase reach and ensure that timely and relevant labor market information is accessible and readily available, in keeping with the objectives of the Philippine Development Plan and the National Labor and Employment Plan 2023-2028 towards increasing the employability of Filipinos and expanding access to employment opportunities.

Consistent with the goal of linking workers to employment opportunities by accelerating job search and placement, and implementing labor market programs which will enhance youth employability, better employment outreach to rural communities and increase opportunities to the marginalized and vulnerable members of the labor market, below are the key partnership initiatives of the Department:

Table 11. Key Partnerships of the DOLE: 2022 - 2023

Memorandum of Understanding/Agreement/ Joint Memorandum Circular	Partner Agencies and Organizations
MOU between DOLE and Private Employers for the Implementation of the SPES and the JSP	Panasonic, Lay Bare Philippines, Lucendi, San Jose Dialysis Center
MOA with SM Supermalls and Robinsons Land Inc. for the use of the malls under a free-rent arrangement on DOLE related activities (i.e., job fair. Batang Malaya)	SM Supermalls and Robinsons Land, Inc.
First Time Jobseekers Assistance Act (FTJAA) Joint Operational Guidelines (JOG)	FTJAA Inter-Agency Monitoring Committee Member Agencies
Memorandum of Understanding for the Implementation of the JSP	Aboitiz Equity Ventures
Renewal of partnership on employment facilitation (i.e. job fair, CDSP, PJN/PEIS)	STI Colleges
Renewal of partnership with McDonald Phils (MOU) for SPES implementation	McDonald Philippines
MOA between the DOLE and DMW on the sharing mechanism on the National Maritime Polytechnic	DMW, NMP
MOA between the DOLE, TESDA, and IBM Philippines	IBM
MOU between DOLE and Private Employers for the implementation of JSP and the SPES	Pascal Resources Energy, Inc., Beyond Innovations, Inc.
Renewal of partnership with McDonald Phils (MOU) for JSP implementation	McDonalds UN Avenue Branch
MOA signing with Megaworld for the use of the malls under a free-rent arrangement on DOLE related activities (i.e. job fair, Batang Malaya)	Megaworld Corp.
Joint Memorandum Circular between DOLE and TESDA	TESDA
Strengthening and Linking of DOLE And TESDA's Programs	
Mutual Cooperation Agreement for a Concerned Drive against All Forms of Illegal Online Gambling, Kidnapping, and other Criminal or Unlawful Acts Committed in Relation to Philippine Offshore Gaming Operations (POGO) and other Authorized Online Gaming Operations	PAGCOR, PNP, NBI, BI, DOJ-OOC, DOLE , AMLC,
Joint Memorandum Circular for Visa-Issuing Agencies	DOJ, BI, DFA, DOLE, DOT, PRA, DTI-BOI, PEZA, CEZA, SBMA, CDC, AFAB, APECO
JMC between DOLE and TESDA in the Upskilling of Kasambahays	TESDA
Data Sharing Agreement (DSA) between DOLE and BI on foreign nationals working in the Philippines	BI

LEP Priority 1

Maximizing Productive, Remunerative, Freely Chosen, and Sustainable Work and Employment Opportunities

LEP Priority 2

Ensuring Labor Governance that respects all Fundamental Principles and Rights at Work, International Labor Standards and Human Rights

LEP Priority 3

Building an Equitable and Inclusive Social Protection

IX. LABOR AND EMPLOYMENT PLAN 2023-2028

The Philippine Labor and Employment Plan (LEP) 2023-2028, aligned with PDP 2023-2028, aims to enhance economic productivity through targeted interventions in workforce development. It prioritizes three key areas: (1) maximizing productive, remunerative, freely chosen, and sustainable work and employment opportunities; (2) ensuring labor market governance that respects all fundamental principles and rights at work, international labor standards and human rights; and (3) building equitable and inclusive social protection.

A. LEP Priority 1

In the pursuit of enhanced employability, the LEP advocates continual reinforcement of core employability through knowledge and skills within basic and higher education and TVET. The proposal entails the creation of modern and responsive interventions in TVET, apprenticeships, and education, strategically aligning them with industry demands, and encompassing the integration of environmentally sustainable skills and occupations. Additional vital elements encompass formulating and promoting a national policy for lifelong learning, increasing awareness and application of the Philippine Qualifications Framework (PQF) and Philippine Skills Framework (PSF) in pivotal employment sectors, resolving qualification standard concerns for hiring senior high school graduates, and actively engaging in youth employability programs. Collectively, these measures seek to comprehensively tackle the diverse challenges associated with employability in the country.

Furthermore, ensuring expanded employment opportunities is as crucial as providing workers with skills, and the key solution is a public and freely accessible Labor Market Information System (LMIS). This system, facilitated by Public Employment Service Offices (PESOs) under DOLE supervision, uses PhilJobNet and PESO Employment Information System for efficient skill-job matching. Adhering to international standards, the LMIS should be managed by professional staff.

B. LEP Priority 2

The second priority of the PLEP focuses on a comprehensive approach to enhance labor administration capacity for the effective implementation and enforcement of labor standards. The PLEP aims to continuously improve the skills and capabilities of labor inspectors, labor arbiters, conciliators, and commissioners by providing ongoing training to guarantee they can efficiently address and resolve the cases arising from the application of labor laws. Additionally, to ensure compliance with labor standards, it is essential to strengthen tripartism at national, regional, and industry levels for genuine and competency-based representation of workers and employers in tripartite consultative and decision-making bodies.

C. LEP Priority 3

The Philippines seeks to extend social protection (SP) to all through enhanced and inclusive implementation of social protection policies, programs, and mechanisms, as well as through strengthened policy and legal framework supported by research. There are many SP programs implemented by various agencies, consequently, encapsulated in the PLEP is the continuous implementation of emergency employment, subsidies, and cash transfers, and livelihood skills training program to vulnerable and marginalized workers linking it to active labor market policies and interventions. Moreover, there is a need to strengthen monitoring and control mechanisms, including harmonizing data for the effective planning and implementation of SP policies and programs.

X. WAYS FORWARD

As part of the Department's thrust under the Philippine Labor and Employment Plan 2023-2028 towards expanding access to employment and work opportunities in the implementation of programs, the Department aims to strengthen the Labor Market Information System of the country through collaboration with relevant government agencies, stakeholders and expanding its network across various industries and sectors, particularly:

- To improve the employability of our workforce, the Department tracks labor and skills supply and demand, anticipating the skills needs of rapidly developing and emerging industries. This is, ultimately, to align our modernized and responsive technical and vocational education and training strategy with arising trends and technology-driven transformations in the labor market;
- Creation of Sub-committee or Interagency Committee on Labor Market Information Systems that will serve as a forum for the exchange of insights, expert knowledge and best practices, and technical challenges and solutions, towards the development and dissemination of labor market information. The committee shall also expedite the exchange and verification of information within and among the agencies including projected or forecasted labor market information;
- Development of employment forecasting methodology to improve the country's projection on labor market supply and demand in partnership with the International Labour Organization and other stakeholders;
- With the Department's commitments under the RA No. 11927, the DOLE will continue initiatives for the completion of the Digital Technology and Digital Skills Mapping that will serve as input to the Digital Technology and Digital Skills Roadmap;
- Upgrading of skills standards, competency assessment, and certification based on robust LMI and benchmarked against international standards through Mutual Recognition of Skills with fellow ASEAN Member States and diplomatic allies enhances the global competitiveness of Filipino professionals. This would allow the workforce to move readily and easily between and across education, training, and employment sectors within their field; and
- Fostering lifelong learning through professional standards and licensure examinations aligned with international standards. Continuing professional development towards own learning and growth also offers opportunities for non-formal education of professionals to be accumulated and transferred, allowing a professional to progress from one qualification to another, and thus facilitating professional mobility and mutual recognition of professional qualifications. There is a need to invest in adults with high-value skills, promoting professional growth and encouraging lifelong learning in the workplace.
